

Bolly Aviation is 100% Australian owned and operated and has been in the Aerospace industry for over 25 years, designing and manufacturing carbon composite aircraft components. Coupling this experience with modern aerospace engineering, Bolly Aviation has begun developing the next generation of composite rifle stocks.

Bolly Aviation Composite Stocks are designed by shooters, for shooters. These light weight competition grade stocks are 100% weather proof and the most rigid in their class. Produced using the same methods and in the same factory as all of Bolly's world class products, we measure lead times in days not months.

Our first two models are available now, along with a full suite of finishing options and accessories to produce the rifle system you have always dreamed of. Want to be a better shooter? Better get a Bolly.

Bolly hits the target every time!

Bolly is committed to backing up our products with parts, service and accessories. We will continue to add to our product line, saving you the time of sourcing items.
